

July 19, 2017

Hi Wendy,

As discussed today,

We have provisioned fibre for the 25 points indicated on the maps attached. They are ready for installation.

As agreed at the time, Vumatel will cover the 25 camera installations as part of our Residents Association Security initiative.

Please bear in mind that we will not be covering the data cost post each installation, this will be the resident association's or security company's responsibility.

Kindly note that there are lots of possible security setups that can be implemented to cater for your budget that doesn't require a dedicated installation at each pole.

Also note that the Residents Association is responsible to install/ensure each camera pole, camera's and a power source to each pole.

Space is required for us to install a unit that is 14cmx10cmx6cm, into the camera pole.

The Internet Service Provider will provide the static IP's for each camera to the security company so they can manage the incoming feed from the cameras.

When the Woodrock Residents Association is ready to install fibre into the camera poles, please inform Vumatel and request for a route plan to be implemented for each camera pole you wish for us to install into.

I'd recommend that the installation team assigned to the task is in contact with the security company to ensure a speedy installation.

Kind regards

Josh Rudman
